1.0 INTRODUCTION TO TERM SOFTWARE LICENSE

Probaris is pleased to offer our software products and services under the GSA Schedule 70, Special Item Number 132-32. This document provides a description of Probaris items available on SIN 132-32.

1.1 PROBARIS SP SOFTWARE

Probaris SP (Secure Process) combines business process management (BPM) and security technology in a flexible enterprise software platform. SP allows organizations to easily develop, automate, and manage electronic business processes in a highly secure, auditable, and fully authenticated web-enabled environment. SP has the most advanced security and authentication features available among all BPM products on the market today. Business processes can be configured to require different levels of authentication at different process steps. A variety of authentication methods are supported out-of-the-box, including:

- Smart cards
- Digital Certificates
- Strong Passwords

In addition, custom authentication methods can be deployed to integrate with single sign-on solutions, SAML and OCSP.

SP can be used to automate all enterprise business processes. With Probaris SP, business processes can be designed and implemented quickly based on the specific needs of the organization. Processes can be easily modified as business processes evolve over time. Each discrete step in a business process can have different authorization and authentication policies; workflows can incorporate high-trust individuals, individuals outside of your organization as well as anonymous users.

The Probaris SP software license purchase price is based on the quantity of end users. The minimum quantity purchase of one-year user term licenses is 5,000. Discounts are available for larger volume purchases. Discounts are available for years two and beyond depending on the term of the contract.

Table 1 illustrates the complete volume purchase discount schedule for Probaris SP user licenses. The purchase of the minimum quantity of SP user licenses includes a license to all SP server software components. Organizations purchasing SP may deploy additional instances of the server software to support process development, testing, backup, and support without restriction.

A user license term will automatically renew after one year unless cancelled by the user or an appropriate agent. Once cancelled, user rights may not be renewed, but a new user license may be purchased effective with the date the prior license ended so that there is no gap in service.
